

NODUS Cloud OS™ 4.0

Bursting Configurations that Bring the Fastest Time to Results at the Lowest Possible Cost

“Only Pay for What You Need”

Bursting Configurations

Bursting Service Enabled

The NODUS burst function detects what jobs are in the queue and automatically spins up, takes off-line, or shuts down nodes depending on the total requirements for the queue. If there are not enough on-line nodes to run all jobs, bursting will bring on as many nodes as needed. If there are more nodes than needed, the excess nodes will be taken off-line. If the job queue is empty, all nodes will be shut down after a specified period of time.
